

NVIRO™

Introducing Eagle Flexible Packaging's *NVIRO™—Environmentally Friendly Packaging*

Major mass retailers are becoming more environmentally responsible by introducing packaging guidelines that encourage and reward sustainable packaging practices. In response, many national brand companies are re-thinking how they can support a higher level of sustainability and better align their products with the retailer's earth-friendly guidelines.

To address this emerging need, Eagle Flexible Packaging has developed an exclusive earth-friendly program, **NVIRO™**, that offers brand packaging buyers responsible choices.

NVIRO™ I

Eagle Flexible Packaging prints with Low VOC water-based ink and adhesive systems. Water-based inks vs. solvent-based inks are far lower in VOCs which make them safer for operations and better for the environment.

NVIRO™ II

Combines Eagle Flexible Packaging's environmentally friendly low VOC ink systems with biodegradable/compostable films.

NVIRO™ II Hybrid

Hybrid combines Eagle Flexible Packaging's environmentally friendly low VOC ink systems with as much sustainable content as possible. Where we cannot produce a 100% sustainable package due to end-use requirements, we may be able to offer, for example, a package with 50% sustainable content and/or 75% biodegradable content.

NVIRO™ III

Combines Eagle Flexible Packaging's environmentally friendly low VOC ink systems with films or substrates made from sustainable or renewable resources.

For more information, call Eagle Flexible Packaging at 630.876.6763. We're ready to become your partner in producing environmentally friendly packaging for a better future.
